

Old Mr. Mohs

Old Mister Mohs had ten toes, which he counted again and again
One day he studied his favorite minerals and discovered an amazing
thing. Old Mister Mohs' toes, old Mister Mohs' toes,
one two three four five six seven eight nine ten.

Sing it again now.

Old Mister Mohs looked real close at the minerals before his eye.
Talc, gypsum, calcite, fluorite, apatite, feldspar, quartz, topaz,
corundum, and diamonds, my oh my!

Old Mister Mohs' toes, old Mister Mohs' toes,
one two three four five six seven eight nine ten.

Sing it once again now.

Old Mister Mohs was thirty-nine years old when he came up with the
hardness scale. One means soft and ten means hard, scratch a
mineral that's how you tell,

Old Mister Mohs' toes, old Mister Mohs' toes,
one two three four five six seven eight nine ten.
